À Fabrice TRIQUET <triquetf@helha.be>

Dear Fabrice,

Please try to start device driver installation with administrative privileges (right mouser click on EXE file and click on Run as Administrator).

Drivers for AVRprog2 software

Subject: MikroProg AVR installation problem

Message:

Hello, I bought several MikroProg AVR devices to work with my students. When I launch the executable file USB18PRG-Vista-x64 for the driver installation, the error message appears on the display "Error creating process, Reason: L'opération demandée nécessite une élévation. Can you fix the problem? It's something wrong with the installation process? The OS are Windows 10 or 11. Thank you and regards, Fabrice
